

ADIOS2- The Legacy

- ADIOS2 (Automated Data Inquiry for Oil Spills) is an oil weathering model that incorporates a database containing more than a thousand crude oils and refined products, and provides quick estimates of the expected characteristics and behavior of oil spilled into the marine environment. The predictions it makes, presented as both graphics and text, are designed to help answer questions that typically arise during spill response and cleanup.

ADIOS2 GRAPHICS

ADIOS2 Structure

THE PRIMARY PURPOSE OF THE MODEL

The logo for ADIOS3, with "ADIOS" in a bold, grey, sans-serif font and the "3" in a red, stylized script font.

Is a **RESPONSE** Tool

Not a research project

Not a damage assessment model

Not for legal or political purposes

Information Quality Act

- Models are required to use data of known quality, apply sound analytical techniques, and undergo review before dissemination
- Third-party information are subject to the same requirements

What Platform?

ADIOS 1

ADIOS 2

ADIOS 3

POSSIBLE CONCEPTUAL DESIGN FOR THE NEW MODEL

- Like 'concept automobiles' the actual production model will not end up looking exactly like this strawman.
- Consider this presentation as a topic for discussion

Assumption: You are somewhat familiar with
ADIOS2

ADIOS₃

Environmental data

- Similar to ADIOS2 except adjustments for type of spill
- EXAMPLES-
- River spill will ask for current data, river cross section, and sediment load, but not fetch
- Leaking tanker that is not anchored will not ask for current data
