

# Workshop Structure

# INTENDED OUTCOMES

To understand technical readiness of  
commercial scale OTEC system

# This Workshop is NOT:

- A decision making meeting
- Looking to define one “best” technology
- Asking for disclosure of proprietary information or design specs
- Focused on environmental impacts
- Focused on regulatory challenges
- About the process to get a license for commercial OTEC
  
- It IS focused on technical, engineering issues!

# Workshop Structure

- Mostly in small groups. Three breakout sessions per topic. Reports to large group on Monday and Tuesday afternoons.
- Small group facilitators will manage the discussion and help the group develop report outs.
- Each small group has an assigned note-taker.
- Success in the small groups will come from active participation by all, and allowing all to have a voice.
- Issues that are relevant but not within scope of this workshop will be captured on a “Parking Lot.”
- Nancy Kinner and Iris Ioffreda will be floaters.

# YOUR ROLE

- What will I take away?
- What will I contribute?
- What do I need to and not do to make both those things happen?

# Ground Rules

- Be fully present (which includes turn off ringtones for cell phones and blackberries)
- Honor time schedules
- Speak openly and honestly and only for yourself
- Allow everyone an opportunity to express their views
- Ask questions and listen for understanding
