CAMEO Stakeholders Discussion Questions

Development Issue: Data Standard

1. Is the present Tier2 Submit submission file adequate for your organization's use?

Development Issue: Web Accessible Suite:

1. How many submitters do you have? (For a state accepting only Tier2Submit submissions, this would be the number of .t2s files.)
2. How does the number of submissions you receive per day vary over time? What is the percentage of total submissions that arrive in February? Is there a big rush just before the deadline?
3. Approximately, how many Tier2 facilities are in your state? How many chemicals in inventory and contacts do they have?
4. Does your state envision/anticipate needing to continue to accept Tier2Submit stand alone for other systems data?
5. Do you currently do anything to verify the identity of the sender of a submission?
6. What security controls do you require for web applications that run on your servers?
7. Based on the document outline attached, do you have access to IT resources that would make it possible for your state to manage software resources, maintenance, and updates on a state/local level?
8. Please address your concerns or ideas regarding the importance/priority of the following:
   a. Electronic signatures
   b. IT security – running virtual machines, managing log in for facilities
   c. Access to information – how would LEPCs, fire services, and other emergency responders get access?
   d. Data unique to the state
   e. Other concerns/ideas that you state may have with a server-based Tier2 Submit program
9. Are there other options in lieu of creating a web accessible suite for CAMEO?

Development Issue: Training and Outreach

1. Estimate the awareness of CAMEO in your region, state, or local area (% of LEPCs know/use)?
2. Would an online training or another type of training for CAMEO be helpful to your organization?
   a. For these types of training, what topics would be the most helpful?
   b. What is the most effective length of time for an online training module (# of minutes/sessions)? What topics should be covered in each session/module?
3. Have you heard of *CAMEO Companion*? If yes, would updating that be helpful to your organization?
4. Do you have advice on how to better reach LEPCs and fire departments about the benefits of CAMEO? Please share any conferences or other venues that you think would be appropriate for outreach to these stakeholders.

Development Issue: Mobile Apps

1. Is there anything other than an EPCRA facility data viewer (no user editing) and CAMEO chemicals that you would envision in a mobile app?
2. Would a static map generated from Marplot (as opposed to requiring internet access to view maps) be useful to your organization to view EPCRA data?
3. Would a map with DOT Emergency Response Guide (ERG) Protective Action Distances (PAD) and initial isolation distances meet your organization's needs?
